SUMMARY

Data Engineer building scalable data pipelines and ETL systems on AWS. Experience ingesting, transforming, and modeling production data from multiple sources using Python, dbt, and modern data tools. Focused on data quality and making raw data accessible for analytics and decision making.

PROFESSIONAL EXPERIENCE

Junior Ingestion Specialist

05/2026 – Present

ProQu

Remote

- Build and maintain production data pipelines that ingest and normalize data from multiple sources
- Develop ETL workflows using Python and AWS services including S3, Glue, and Athena
- Ensure data quality and consistency across ingestion processes for downstream consumption

PROJECTS

Rag System

Python, Qwen 2.5, Embeddings

- Built a Retrieval Augmented Generation pipeline enabling an LLM to answer questions using external documents instead of relying only on pre trained knowledge.
- Implemented document chunking and embedding generation to convert raw files into searchable vector representations.
- Developed semantic search to retrieve the most relevant context based on query similarity.
- Integrated retrieved context with Qwen 2.5 to produce grounded, context aware responses.
- Designed a modular architecture allowing easy swapping of embedding models and LLM backends.

Transit Lens

Python, DuckDB, dbt, Streamlit, GTFS, Leaflet

- Built a delay-intelligence dashboard ingesting public schedule and real-time GTFS feeds across four European transit networks
- Modeled and transformed raw feed data using dbt to surface delayed routes, busiest stops, and peak-delay windows per city
- Visualized geospatial transit patterns interactively using Leaflet and Streamlit

FovIQ EXIF Insights

Python, DuckDB, dbt, Streamlit, Pandas, Altair

- Built a local ETL pipeline to transform a nature photography library into structured EXIF analytics
- Modeled data with dbt to analyze shooting patterns by hour, capture location, and gear/exposure combinations
- Delivered insights through an interactive Streamlit dashboard with Altair visualizations

EDUCATION

BSc in Computer Science and Engineering

10/2024 – Present

UBT - University for Business and Technology

SKILLS

- | | | |
|-------------|--------------------------|--------------|
| • PYTHON | • AWS (S3, Glue, Athena) | • dbt |
| • Streamlit | • Data Pipelines | • PostgreSQL |
| • Pandas | • ETL | • GIT |
