PROFESSIONAL EXPERIENCE

Junior Ingestion Specialist

05/2026 – Present

ProQu

Remote

- Architected and maintained production ingestion pipelines normalizing data from heterogeneous sources into analysis-ready formats
- Engineered batch ETL workflows in Python leveraging AWS Glue, S3, and Athena for scalable data processing
- Built a streaming pipeline to power real time notifications, handling continuous event ingestion outside the batch workflow
- Wrote automated tests across ingestion and transformation logic to catch malformed or inconsistent records before downstream consumption

PROJECTS

Rag System

- Built a Retrieval Augmented Generation pipeline enabling an LLM to answer questions grounded in external documents rather than pre-trained knowledge alone
- Implemented document chunking and embedding generation to convert raw files into searchable vector representations
- Developed semantic search for context retrieval based on query similarity, integrated with Qwen 2.5 for grounded responses
- Designed a modular architecture allowing embedding models and LLM backends to be swapped independently

Transit Lens

- Built a delay-intelligence dashboard ingesting real-time and scheduled GTFS feeds across four major European transit networks
- Designed a DuckDB backed data warehouse to store and query large scale GTFS feed data efficiently.
- Modeled and transformed raw feed data using dbt to surface delayed routes, busiest stops, and peakdelay windows
- Built automated data refresh logic to keep dashboards synced with live GTFS feed updates
- Visualized geospatial transit patterns interactively using Leaflet, enabling users to explore delay hotspots by route and stop

FovIQ EXIF Insights

- Built a local ETL pipeline to transform a personal nature photography library into structured EXIF analytics
- Extracted and parsed EXIF metadata (camera settings, GPS, timestamps) from raw image files using Python.
- Modeled data with dbt on top of DuckDB to analyze shooting patterns by hour, capture location, and gear/exposure combinations
- Delivered insights through an interactive Streamlit dashboard with Altair visualizations for exploring trends across shooting sessions

EDUCATION

BSc in Computer Science and Engineering

UBT - University for Business and Technology 🎓

SKILLS

- Data Engineering: Python, dbt, ETL, DuckDB, PostgreSQL
- Cloud: AWS (S3, Glue, Athena), Git
- AI/ML: LLMs, RAG, Vector Search
- Visualization: Streamlit, Leaflet, Altair
