

Rindrit Telaku

Software Engineer

✉ rindritelaku@gmail.com 📍 Pristina 🔗 linkedin.com/in/rindrittelaku 🐙 github.com/RindTel

SUMMARY

Software Engineer focused on building AI systems and full stack applications. Hands on experience developing Retrieval Augmented Generation (RAG) pipelines, web platforms, and network infrastructure projects. Interested in designing practical, scalable systems that connect LLMs with real world data and production style applications.

EDUCATION

UBT - University for Business and Technology, 10/2024 – Present
BSc in Computer Science and Engineering

PROJECTS

Rag System, *Python, Qwen 2.5, Embeddings*

- Built a Retrieval Augmented Generation pipeline enabling an LLM to answer questions using external documents instead of relying only on pre trained knowledge.
- Implemented document chunking and embedding generation to convert raw files into searchable vector representations.
- Developed semantic search to retrieve the most relevant context based on query similarity.
- Integrated retrieved context with Qwen 2.5 to produce grounded, context aware responses.
- Designed a modular architecture allowing easy swapping of embedding models and LLM backends.

Stadium Network Infrastructure Design, *Cisco Packet Tracer*

- Designed a scalable stadium network architecture to simulate high traffic environments with thousands of concurrent users.
- Segmented network using VLANs to isolate critical services such as administration, security, ticketing, and guest Wi-Fi.
- Configured routing and IP addressing schemes to support scalability and redundancy under peak load conditions.
- Focused on network resilience and traffic distribution during simulated event-level congestion scenarios.

Crowdfunding Web Platform, *React.js, Express, PostgreSQL*

- Built a full stack crowdfunding platform supporting user authentication, campaign creation, and real time funding interactions.
- Designed REST APIs using Express.js to handle user, campaign, and transaction logic.
- Structured a relational PostgreSQL schema to manage campaigns, contributions, and user data efficiently.
- Developed a React frontend connected to backend APIs for dynamic, data driven user experience.
- Implemented end to end system flow from frontend interaction to database persistence.

COURSES

Python for Data Science, Ai & Development, *Coursera / IBM* 01/2025 – 02/2025
Strengthened Python fundamentals and gained exposure to data workflows, basic machine learning concepts, and practical use of data focused libraries in applied development contexts.

Getting started with Python for Data Science, *Codecademy* 10/2024 – 10/2024
- Reinforced core Python programming through structured problem solving and hands on exercises focused on writing clean, efficient code and applying logic to real world scenarios.

SKILLS

PYTHON | JavaScript | React | NODE.JS | Express | PostgreSQL | Rest APIs | RAG / LLM |
Embeddings | GIT | C# | JAVA
